

SOFGENT AI PRODUCT STUDIO

Build AI systems, SaaS MVPs, and delivery capacity fast.

SofGent helps startups and SMEs ship AI-powered services, production-ready MVPs, and embedded engineering support without long vendor cycles or fragile builds.

AI Services

SaaS MVP Delivery

Augmented Teams

2-6 weeks

typical first delivery window

Weekly

working demos and sprint feedback

Arch-first

scope, data, and deployment planned early

Free consultation

AI workflow audit, MVP scoping, and delivery recommendation.

Production-ready AI systems

AI products, automation systems,
with architecture strong enough
to scale.

Architecture [Multi-Tenant Systems](#)

at MVP Delivery

AI services, product workflows, and delivery operations in one execution model.

support@sofgent.com |
calendly.com/sofgent

AI service delivery built around operations, with MVP execution that can survive growth.

We focus on the systems that remove operating friction, ship product value fast, and give founders a production path instead of a rewrite path.

AI service scope

- AI implementation inside the systems your team already runs
- Document intelligence: OCR, extraction, validation, and review flows
- Workflow automation across CRM, ERP, payments, and internal tools
- AI integrations, knowledge systems, and internal business software

30-day MVP launch model

01 Discovery

Define the smallest valuable wedge and the operating constraint it solves.

02 Architecture

Set tenancy, auth, data model, integrations, and deployment path up front.

03 Build

Ship the customer-facing surface, admin workflow, and core API in focused sprints.

04 Launch

Deploy with monitoring, QA, and a handover path your team can own.

4 weeks

first production AI workflow

78%

less manual document handling in sanitized delivery work

Multi-tenant

MVP architecture designed from day one

Best fit

Startups, SMEs, and ops-heavy teams that need real software outcomes fast.

AUGMENTED TEAMS

Augmented teams for delivery spikes, modernization work, and AI execution capacity.

When your internal team needs senior execution without the overhead of full-time hiring, SofGent can operate as an embedded build pod focused on speed, architecture quality, and dependable handoff.

When to use us

- Unblock architecture, integrations, or AI implementation without hiring a full internal squad first.
- Embed with founders, CTOs, or product teams for 30-90 day delivery pushes.
- Own sprint execution, weekly demos, and handoff so internal teams do not inherit chaos.

Typical delivery pod

Tech lead / architect

System boundaries, solution design, delivery direction

Full-stack engineer

App surface, APIs, auth, billing, and product workflows

AI / integration engineer

Automation, OCR, RAG, partner APIs, and orchestration

QA / DevOps support

Release checks, environments, observability, and stabilization

Embedded delivery works best when architecture, build, and operating constraints are reviewed together.

2-5

typical embedded pod size depending on

30-90 day

Weekly demos, direct Slack

Next step

Start with a free architecture review, AI workflow audit, or MVP scoping call.
